New OSHA Crystalline Silica rule requirements

The Federal Occupational Health and Safety Administration (Fed-OSHA) deadline for enforcement of the Crystalline Silica in Construction standard (29 CFR 1926.1153) is coming up soon: **September 23, 2017**. Do you understand how these new regulations will impact your company, employees and operations, customers, etc.? Changes in exposure limits, plus new requirements for training, respiratory protection, written plans, monitoring, record-keeping, etc. will all impact construction and related industries and present new compliance challenges.

What you'll learn: We'll start with a quick review of the new standard, so you can clearly see where the changes exist, including:

- New training requirements
- Respiratory protection requirements
- Written exposure control plans
- Exposure measurement, monitoring, sampling
- Recordkeeping requirements, Medical exam requirements
- **Real world examples** of compliance strategies, important **resources** and
- **Next steps** to get your organization on the road to compliance.
